

## Report on Supply Chain Compliance Volume 3, Number 22. November 12, 2020 China seeks to dominate green car market by 2035

---

By Sascha Matuszak

The Chinese government announced an ambitious plan<sup>[1]</sup> to create a domestic green car supply chain by 2035. The plan calls for more than half of new vehicles sold in 2035 to be “new energy vehicles” connected to the internet. China is gearing up for long-term friction with the United States, and part of the solution is to transform its own automobile industry into a world power. China hopes to lead the way with innovations in batteries and drive systems.
