

Data Analytics and AI to Detect and Defend Fraud Data Analytics and AI to Detect and Defend Fraud

Samantha B. Badlam , Counsel , Ropes & Gray LLP .Emily Treanor, Enterprise Relationship Executive , Lextegrity

November 18, 2020

- Kickbacks and fraud can hide in dark corners of your organization. Data analytics and AI can provide powerful tools to prevent and detect such behaviors. Join an interactive panel using sample data and visualizations
- Learn from a former in-house compliance counsel and current outside counsel with enforcement expertise about how data analytics and AI can transform the risk management efforts of healthcare organizations of any size
- Learn how shifting expectations of government agencies mean that not using data analytics and AI to prevent and detect kickback and fraud risks is no longer a viable option for healthcare organizations
